PROJECTS

Hospital Management System

PYTHON DJANGO | NEXT.JS | MONGODB

As a backend developer working on the Hospital Management System (HMS), I play a crucial role in implementing robust and efficient technologies to ensure seamless functionality and data management. there are four roles Admin, Manager, Doctor, and Patient, and worked on admin and patient apis. The backbone of our HMS relies on a powerful combination of Next.js, Python Django, and MongoDB.

Dairy Management System

JAVA | JAVASWING | MYSQL

This project is based on dairy System in this project, my work is on a back-end site on database connectivity and fetching Data
